METHODS OF JEFFERSON, ADAMS, WEBSTER [MORE PRACTICE]

Since the book (Section 10.3) examples & problems do not provide you with the proper α-value,

consider re-working the 10.3 Outline problems using different methods.

The below problems are <u>not</u> collected & graded – work them only if you need more practice for EXAM 2.

- Rework EX 10.3.1 using the Adams($\alpha = 0.50$) method.

- Rework EX 10.3.1 using the Webster($\alpha = 0.20$) method.

- Rework EX 10.3.2 using the Jefferson($\alpha = -0.25$) method.

    – In case you're wondering, EX 10.3.2 **fails** using Webster's method.

- Rework EX 10.3.3 using the Jefferson($\alpha = -0.25$) method.

- Rework EX 10.3.3 using the Adams($\alpha = 0.50$) method.
